1   Bio

I enrolled as a Computer Science major at IU in the fall of 2016. I was initially drawn to the field of computer science because of my intense curiosity for all things technical. However, as I began my studies, I started to appreciate the knowledge that I was acquiring as something to be put to use to solve real-world problems. To further hone my skill-set, I am an active member of AICC–a student organization where we meet every week to solve challenging coding problems collectively. My immediate educational goals are to develop a skill-set that will allow me to implement logical and creative solutions to the computer science-related problems people face every day. To this end, I hope to enroll as an M.A. student after I complete my B.A. degree. My ultimate goal is apply the skill-set I will have gained during my time at IU in the field of cyber security, or a closely related discipline.

My favorite book that is related the computer science is "Learning Python" by Mark Lutz. It is a 1500 page-long book. I like this book because it was my first computer science book I bought. It is really good for beginner programmers like myself because the author explains concepts with examples. I strongly recommend this book for people who just start to learn computer languages. [1]

2   Education

Major	School	Year
Computer Science	Indiana University	2016 - EXPECT 2019

3 Work Experience

Position	Company	Period
Intern	CEWiT-Indiana University	2017-present
Undergraduate Instructor	Indiana University	Spring 17
